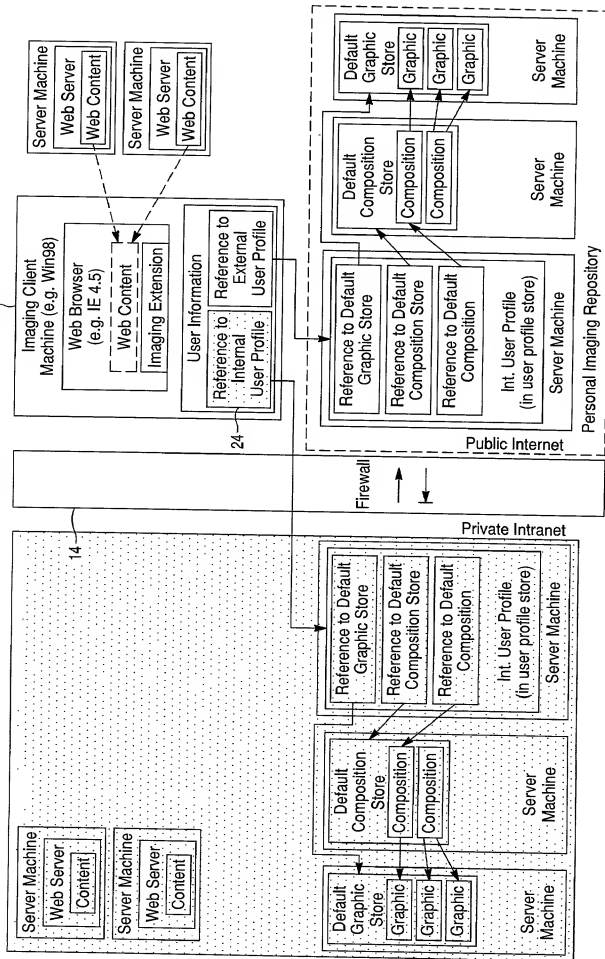

Fig. 3

The diagram illustrates a system architecture for a Personal Imaging Repository, divided into three main sections: Private Intranet, Public Internet, and Personal Imaging Repository.

**Private Intranet:** Contains two Server Machines (30 and 32). Each server machine includes a Web Server and Content. These servers are connected to the Public Internet via a Firewall (14).

**Public Internet:** Contains a Firewall (14) and a Personal Imaging Repository (18). The Personal Imaging Repository includes an Imaging Client Machine (e.g., Win98) with a Web Browser (e.g., IE 4.5) and an Imaging Extension. The Imaging Client Machine is connected to the Web Browser and the Imaging Extension. The Web Browser is connected to the Imaging Extension. The Imaging Extension is connected to the User Information block. The User Information block is connected to the Reference to Def. Int. Graphic Store, the Reference to Def. Int. Composition Store, the Reference to Def. Ext. Graphic Store, the Reference to Def. Ext. Composition Store, and the User Profile (in user profile store).

**Personal Imaging Repository:** Contains two Server Machines (36 and 38). Server Machine 36 includes a Default Composition Store and two Composition blocks. Server Machine 38 includes a Default Graphic Store and three Graphic blocks. The Reference to Def. Int. Graphic Store is connected to the Default Graphic Store. The Reference to Def. Int. Composition Store is connected to the Default Composition Store. The Reference to Def. Ext. Graphic Store is connected to the three Graphic blocks. The Reference to Def. Ext. Composition Store is connected to the two Composition blocks. The User Profile (in user profile store) is connected to the two Composition blocks.

Arrows indicate data flow between the components. Dashed lines represent connections between the Imaging Client Machine and the Web Server and Content of the Server Machines (30 and 32). Solid lines represent connections between the other components.
